WKMS Automated Testing and Coverage Evidence

Evidence updated 25 October 2026 | WKMS subsystem | PR #53 / DDP-79

Local regression results

Scope	Passed tests	Skipped	Suites / details
Backend full Jest	322	33	36 passed; 7 skipped; 0 failures
Frontend full Jest	123	0	20 passed; 0 failures
Realtime gateway focused	17	0	Included within backend total

Targeted realtime coverage

Selection	Statements	Branches	Functions	Lines
Gateway TypeScript file	95.00%	90.00%	90.00%	94.91%
src/realtime/**/*.ts	91.93%	90.00%	90.00%	93.33%

These percentages apply only to the targeted backend realtime selection, not complete WKMS source or total DDP-79 changed-code coverage. The module file has an uninstrumented line in this focused run.

PR-head CI verification

Commit: db7d682c96420eee9c209397fe71c59ab6a92e24. PR #53 targets develop. GitHub Actions WKMS CI run 40173763618 completed SUCCESS. Peer review and merge remained outstanding at the time checked.

Local quality and security

Backend/frontend lint, TypeScript validation and production builds passed. Production npm dependency audits in both applications returned zero vulnerabilities after the patched Multer/NestJS dependency updates.

Evidence still missing

Full changed-code coverage; controlled browser task-mutation-to-notification integration; staging load/performance metrics; deployed WSS routing. These must not be described as passed.
